

A vibrant photograph of a forest stream. The water flows over dark, jagged rocks that are heavily covered in bright green moss. The water is clear and creates small white rapids and a waterfall as it descends. The surrounding forest is dense with green foliage, creating a rich, natural setting.

Since “biological” is practically our middle name, it's no surprise that Carolina Biological Supply Company is dedicated to working towards preserving the delicate ecological balance on our planet.

Our Inquiries in Science™ program is one good example. All instructional materials in each kit are printed on recycled paper. The Inquiries in Science™ box is designed to reduce waste, acting as both a sturdy shipping container (with no need for an extra inner box) and convenient storage. We use light, recyclable air packs. In addition, most kits are refillable so you only replenish supplies as needed without repurchasing items that easily can be reused.

As the Inquiries in Science™ program expands, Carolina will continue to actively search out ways to reduce environmental impact while delivering the highest quality products to our customers.
