Featured article

Probing into Protozoa

Grades 7–12.

When you look at a body of water, it is easy to focus on the obvious—birds, fish, plants, and recreational opportunities. However, unseen are microscopic protozoa inhabiting the water and surrounding substrates. Learn more about these fascinating organisms in this article from biologist Mary Haugen of our Living Zoology Department.

Probing into Protozoa Activity

With this companion activity, students in grades 7–12 can become familiar with the characteristics of organisms belonging to phylum Sarcodina, study *Amoeba proteus* as a typical representative, and compare and contrast it with other members of the phylum.
